EDUCATION

New Jersey Institute of Technology — Dean's List	Newark, NJ
<i>B.S. Computer Science, Minor in Artificial Intelligence</i>	<i>Sep. 2025 - May 2028</i>
Related Coursework: Data Structures & Algorithms, Object-Oriented Design, Database Management, Machine Learning	
CodePath - Technical Interview Prep (TIPS) Advanced	May 2026 - Jul 2026

EXPERIENCE

TD Bank Global Technology Solutions	Fall 2026
<i>Incoming Software Engineering Intern</i>	<i>Mt. Laurel, NJ</i>
VryfID	Jul. 2026 - Present
<i>Software Engineering Intern</i>	<i>New York City, NY</i>
- Ship end-to-end product features in TypeScript and Python across REST APIs, backend services, and full-stack user-facing flows, owning each feature from design through testing to production for a live user base - Built a conversational application assistant that guides users through multi-step submission flows, reducing drop-off on the highest-friction step of the product - Work cross-functionally with product and design to turn ambiguous requirements into accessible, well-tested experiences, iterating on features from real customer feedback and production data	
NJIT Department of Information Systems	Jan. 2026 - Jun. 2026
<i>LLM Systems Researcher</i>	<i>Newark, NJ</i>
- Designed and built a Python test harness exercising 30+ production-scale backend pipelines, independently identifying tool-call hijacking and context-window manipulation failure modes in live, multi-layered systems - Ran systematic threat modeling across three backend architectures, translating ambiguous risk into structured engineering specs used to prioritize fixes	

TECHNICAL PROJECTS

JitHub:1st Place NJIT Bank of America Code-A-Thon <i>React, PostgreSQL, Python, Neo4j, Redis</i>	Link
- Built the full stack end to end: a React + TypeScript client with an interactive D3.js force-directed graph for exploring student, club, and company connections, served by a single REST API - Designed a dual-database backend pairing PostgreSQL for structured records with Neo4j for multi-hop graph traversal, writing complex SQL queries that sustained sub-100ms performance over 300+ ingested student records and 1,500+ auto-generated relationship edges - Implemented a Redis-backed distributed rate limiter and async job queue (Node.js + BullMQ) handling 500+ concurrent requests with fault-tolerant retries and zero data loss under load — a data-intensive, distributed-systems design - Presented the system architecture and engineering tradeoffs to Bank of America engineers and executives in Charlotte	
NJIT SHPE App – App Lead <i>React Native, TypeScript, Expo, Supabase, Figma, Git</i>	Link
- Spearheaded a full UI/UX redesign of the SHPE NJIT app as measured by adoption across all users by directing the UI/UX and fullstack dev teams through a complete interface overhaul. - Boosted member engagement as measured by usage across 200+ members by building a lifetime ranking leaderboard spanning multiple seasons. - Drove member networking as measured by adoption among 200+ users by leading development of a connections feature for discovering other members.	

LEADERSHIP

Society of Hispanic Professional Engineers (SHPE) <i>Webmaster / Mobile Tech Lead</i>	Mar. 2026 - Present
Lead web and mobile development across a 5-person engineering team, keeping feature delivery on a coordinated technical roadmap, for a chapter of 200+ active members	
ColorStack <i>Founding President</i>	Jun. 2026 - Present

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, Java, SQL
Frameworks & Web: React, React native, Next.js, Expo, Tailwind CSS, D3.js, HTML/CSS
Backend & APIs: Node.js, FastAPI, Rest APIs, WebSockets, Prisma(ORM)
Databases & Infrastructure: PostgreSQL, Neo4j, Redis, BullMQ
Testing & DevOps: Playwright, GitHub Actions, CI/CD, Expo EAS, Git
