EDUCATION

New Jersey Institute of Technology

Newark, NJ

B.S. Computer Science, Minor in Math | GPA: 3.5

Expected: 2028

- Related Coursework: Data Structures & Algorithms, Object-Oriented Design, Software Engineering, Database Management

EXPERIENCE

TD Bank

Mt. Laurel, NJ

Software Engineering Co-op

Sep. 2026 – Present

- Developing **SAML 2.0 SSO** for TD Business with **Java/Spring Boot**, across backend auth and login for **10M** clients.
- Automating **cross-platform ticket consolidation** from JIRA, VeraCode, ServiceNow, and GitHub into GitHub Discussions via **Python** and **GraphQL** for **52 repositories** in TD's BCUS business unit.
- Building **GitHub Actions** workflows that refresh a **unified vulnerability view** on a schedule, replacing four separate trackers with one source of truth.

Nessoo

New York City, NY

Backend & AI Engineering Intern

Jul. 2026 – Aug. 2026

- Built a **RAG chatbot** on **Grok** retrieval, grounding renter answers in listing data from **500+** NYC apartments for **1,000+** renters.
- Guided renters through required documents and eligibility checks in-chat, cutting **incomplete applications by 15%**.
- Engineered a **Python matching engine** that filters renter–unit pairs through **hard eligibility gates** (credit, income-to-rent, pets, background) and ranks them on **6 weighted preferences**.
- Implemented **deterministic greedy assignment** with tie-breaks on application time and renter ID, producing reproducible, first-come-fair matches.

SoFi

New York City, NY

Software Engineering Extern

Aug. 2026

- Led a 4-person team building Picture Vault for the SoFi app in **5 hours** with **React Native** and **TypeScript**, using **computer vision** and **Claude Haiku** to price items from a photo.
- Designed an **automated savings vault** that routes a share of each deposit toward the item and orders it once funded; demoed live to senior leadership, processing **30+** requests.

TECHNICAL PROJECTS

Crypto Market Ingestion API | [GitHub](#)

Python, FastAPI, Redis, Apache Kafka, PostgreSQL, Docker, wrk2

- Built an **async ingestion service** with **asyncio** and **WebSockets**, fanning out live trades via **Redis Pub/Sub**.
- Served market data via **FastAPI** with **Redis caching**, sustaining **10,000 req/sec** at **sub-10ms p99** under wrk2 load tests.
- Built a **Kafka-backed tick stream** (5K-message rolling window) with batched writes to **PostgreSQL + TimescaleDB**.

Order Book Matching Engine | [GitHub](#)

Java, JUnit, JMH

- Built a **price-time priority matching engine** using TreeMap price levels with **O(1)** top-of-book and cancels.
- Cut **p99 latency by 70%** at **2M orders/sec** via object pooling and primitive collections.
- Benchmarked with JMH and validated via **40 JUnit tests** covering partial fills, crossing orders, and cancel-replace.

LEADERSHIP & AWARDS

ColorStack

Newark, NJ

Founder & President

Jun. 2026 – Present

- Founded NJIT's ColorStack chapter, earning Student Senate recognition and growing to **50+** members.
- Building the chapter site (colorstacknjit.org) from scratch with **Next.js**, **TypeScript**, and **Tailwind CSS**.

Society of Hispanic Professional Engineers (SHPE)

Newark, NJ

Tech Lead

Jul. 2026 – Present

- Leading an **8-person engineering team** on the chapter's **React Native** app, serving **350+** members.
- Shipped **15+ features** in a 4-week sprint, including **group messaging**, **push notifications**, and **centralized user analytics**, growing the user base by **200%**.

JitHub: Campus Operating System | 1st Place, NJIT X Bank of America Code-A-Thon

Newark, NJ

- Placed **1st of 22 teams**, building the full backend and a **dual-database architecture** (PostgreSQL + Neo4j) in 2 weeks; presented to senior engineers and executives at Charlotte HQ.
- Built a **Redis-backed leaky bucket rate limiter** handling **1,000+** concurrent requests, load-tested to **10,000+** users.
- Developed a **pgvector RAG chatbot** over NJIT organization data scraped via the CampusLabs API, separating graph traversal from vector search.

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript/TypeScript

Backend & APIs: FastAPI, Spring Boot, asyncio, REST, WebSockets, GraphQL, Prisma

Systems & Infrastructure: PostgreSQL, Neo4j, Redis, Git, GitHub Actions, Docker, CI/CD, React Native, Kafka
